

SURFACE WATER ELEVATION

Paddock Lake is a “Kettle” lake formed by glaciers. The lake is 132 acres in size with a maximum depth of 32 feet and has an approximate water volume of 1,281 (acre feet). The lakes watershed is approximately 265 acres in size.

The lake drains from an outfall (spillway) located in the Southeast corner of the lake. This spillway has an intermittent flow of lake water, with a surface elevation of 794.2. generally, the stream flows during spring and summer months, but often ceases to flow water out of the lake in July and August.

The lake surface water elevation is monitored weekly, below lists the **2024, 2023, 2022 and 2021** lake’s surface water elevations using National Geodetic Vertical Datum of 1929 (NGVD 29), previously referred to as Sea Level datum of 1929.
